

The ultimate eyelet solution for big volume users
A SINGLE OPERATOR CAN DO THE JOB

Roll2Roll CE

OOOO Industrial productivity

The Roll 2 Roll is a high output eyeletting machine with which a single operator can set eyelets on both sides of the banner on a fully automatic mode. It features adjustable width, automatic edge alignment, rewinding unit with tension control and a slitting module to cut banners.

Operator interface is extremely easy to use, being able to control distance between eyelets and from the edge, banner length ...

It features two working modes, "Roll2Roll" to eyelet full rolls and "Banner" where operator can input banner length and number of eyelets and the machine will automatically slit the banner once finished.

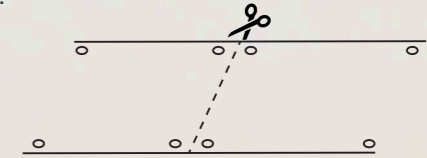

Choose between full rolls or banners to the desire lenght

Mode "Roll 2 Roll"

- The roll is unwound and eyelets are set.
- The rewinding unit with tensioning system will perfectly finish the rolls even with eyelets already set.

Mode "Banner"

- Roll is unwound and eyelets are set.
- Once banner has reached the correct length, it automatically will be slitted between the last eyelet of the banner and the first one of the next as shown.

The ultimate eyelet solution for big volume users

A SINGLE OPERATOR CAN DO THE JOB

Reasons to choose Roll2Roll:

- 1 Easy roll loading and wrinkle free with its tensioning systems.
- 2 Adjustable distance between eyelet machines to make any roll width between 600 and 2400mm (model shown).
- 3 Edge-alignment system with photo-sensors and pneumatic adjustment.
- 4 Easy to use operator interface with large touchscreen.
- 5 Traction pulling station with adjustable pressure rollers to work with different banner widths.
- 6 It can set eyelets on both sides of the banners or on a single one depending on your requirements.
- 7 It is possible to add a stop every X meters to perform wind-slits (to be done manually).
- 8 Precise slitting unit with rotary cutter.
- 9 Operator safety first: emergency stops and safety rope pull switches, safety light curtains are optional.
- 10 Rewinding unit with tensioning system and pneumatic shaft. Rolls are finished even with eyelets already set.

Roll2Roll Lite CE

OOOO Industrial productivity

For customers that need to eyelet full rolls but not require a fully automatic system. Increase production and reduce labor cost with the new Roll2Roll Lite. To eyelet full rolls won't be a problem anymore.

- Operator pulls the banner using a handwheel.
- With a single button setting is done on both sides of the banner.
- Adjustable working distance for different roll widths (model shown is for 600mm - 1600mm).
- Accurate settings: if eyelet marks are printed with the RIP, operator can set over them using the laser pointer and the mirror provided.

- **Unique 2 in 1 feature:** one of the machines turns 180° and can be used as a standard eyelet press to finish banners, no need to invest in another machine.
- **Optional kit:** banner holding steel plate and foot pedal (as shown right) to work as a traditional eyelet press.
- Roll 2 Roll Lite can be assembled with Evolution or AutoCross eyelet machines, depending on customers' requirements.
