notes The product is completely biodegradable and recyclable. Special runs available upon request, also for magnetic stripe applications meeting IATA standards.

The Company reserves the right to modify the technological features of the product in relation to market requirements.

Ticket products are strength boards for specific uses in cards and tickets also with magnetic stripes, in technical applications for industrial uses in textile business, etc. Good physical performances like stiffness and smoothness.

applications

Can be used with no problems with the main printing systems: letterpress, offset, blind embossing, hot foil stamping, thermography and screen printing. The macro-porous surface suggests the use of oxidative drying inks.

printing
suggestions

Varnishing and plastic laminating must be assessed in advance. The varnish coated with an offset machine is almost fully absorbed and therefore does not improve gloss or protection. Screen-printing varnishing achieves better results, although it is often necessary to perform two shots to achieve a distinctly evident result. The surface roughness typical of uncoated papers may give rise to micro defects with plastic laminating caused by incomplete adhesion of the film to the substrate. Good results with major processing operations such as: cutting, die-cutting, scoring, folding and glueing.
